

UNIVERSITY HACKATHON 2026 • PEOPLE MOBILITY CHALLENGE

FlowTransit

Shared electric mobility that clears the way home.

Move demand. Not traffic.

FlowTransit turns peak-hour trips into shared, intelligently routed journeys — linking calm internal roads to faster highway exits.

CALM INTERNAL ROADS

SHARED ELECTRIC SHUTTLES

TRANSIT SIGNAL PRIORITY

1 KM DRIVE

45

MINUTES

Single-occupancy vehicles turn one exit into neighbourhood-wide disruption.

Who gets time back?

01

COMMUTERS

Up to 1 hour reclaimed daily

02

STUDENTS + NON-DRIVERS

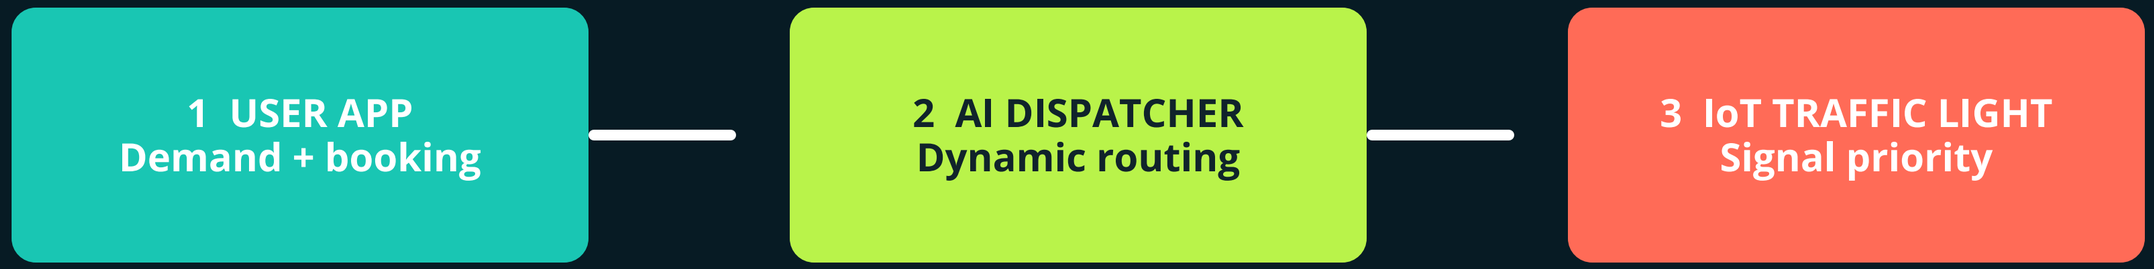

Reliable first / last mile

03

THE COMMUNITY

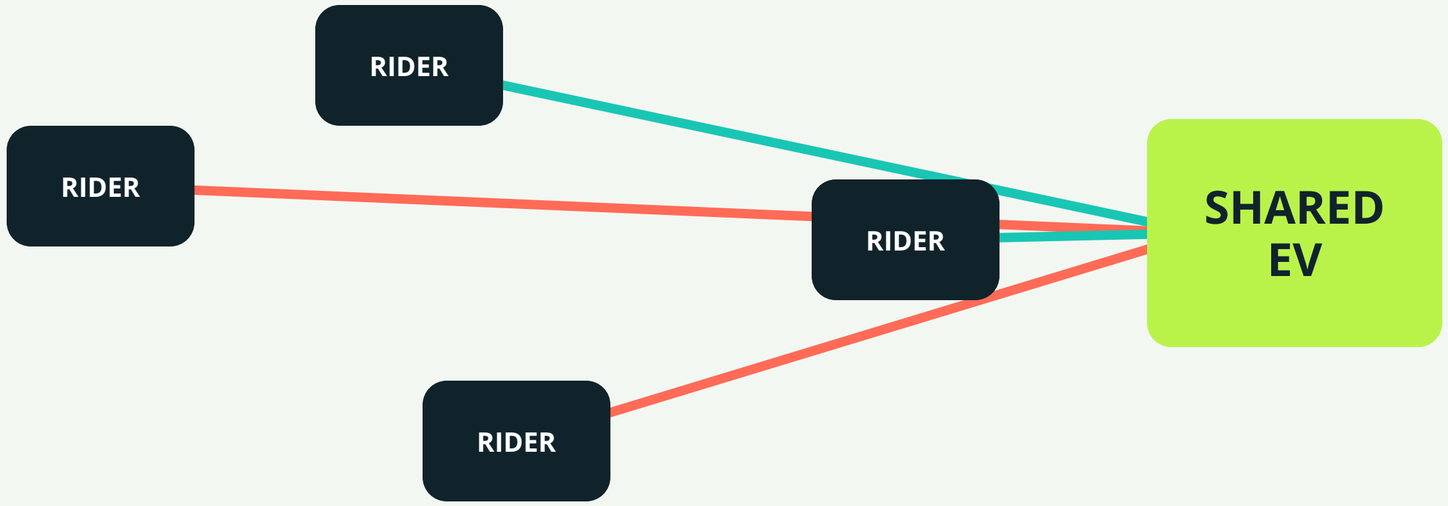

Less shortcut noise + pollution

Three brains.
One seamless ride.

Demand flows in. Routes adapt. Green time opens ahead.

AI predicts.
Neighbours share.

15:1

CAR REPLACEMENT RATIO

A safe stop within 3 minutes.

Virtual stops cluster demand on main roads — never through residential alleys.

QUIETER STREETS. SAFER NEIGHBOURHOODS.

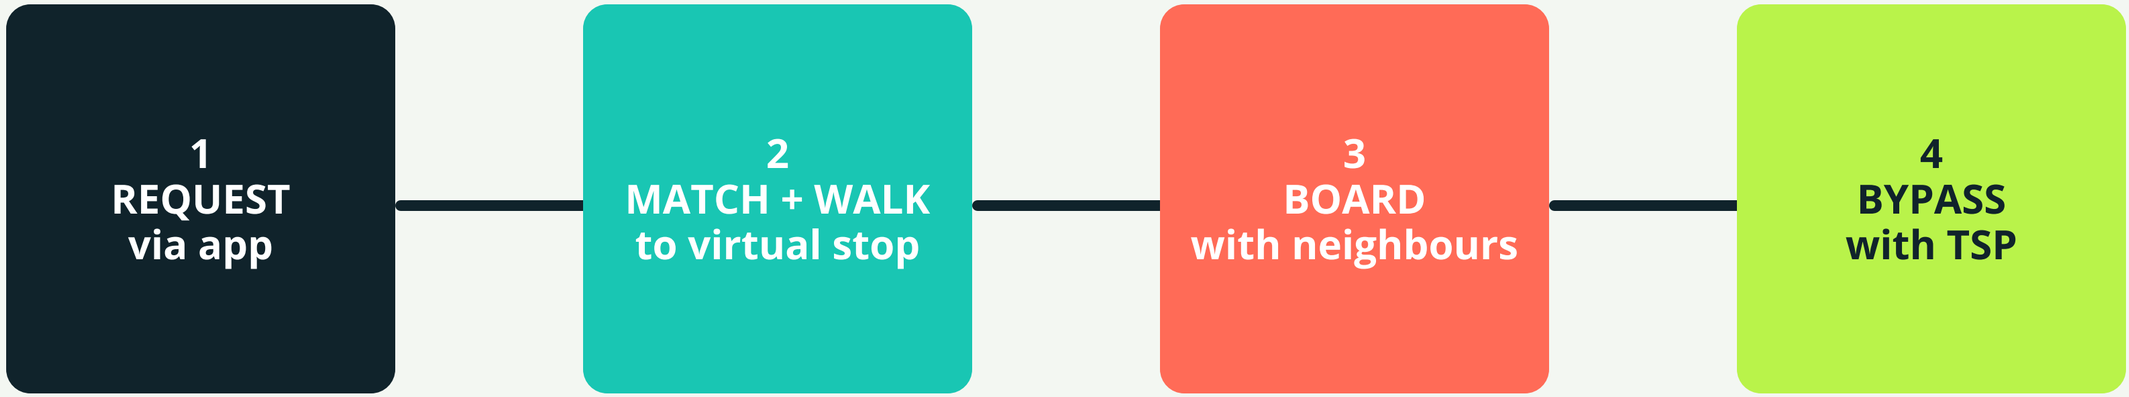

GREEN ADVANTAGE

IoT-enabled lights extend green time for a fully loaded 15-passenger shuttle.

BYPASS THE QUEUE

Request → ride → bypass

One coordinated journey replaces fragmented car trips.

Built to matter.
Built to scale.

RELEVANT

Peak exit pain

IMPACTFUL

15 cars → 1 EV

INNOVATIVE

AI + TSP

FEASIBLE

No heavy infrastructure

SCALABLE

Multi-precinct API

EVIDENCE-BASED

Proven pilots in Selangor

12 months to township scale

MONTHS 1–3

PROVE

3 EV shuttles
10 virtual stops
IoT integration

MONTHS 4–6

LEARN

Measure impact
Resident feedback
AI tuning

MONTHS 7–12

SCALE

15 vehicles
Multi-precinct rollout
API launch

Time back. Safer streets. Cleaner air.

Redesigning urban mobility for people and planet.

Thank you for reviewing the FlowTransit Proposal.
